

# Clinical Practice Guideline: Management of Stable Angina, Hypertension

## Clinical Practice Guideline

**Condition:** Stable Angina, Hypertension

**Target Population:** Clinical trial participants (n=400)

**Evidence Level:** Grade A

**Last Updated:** March 2023

## Treatment Recommendations

## Clinical Evidence Summary

Current evidence supports the use of established treatment protocols for Stable Angina, Hypertension. Clinical trials have demonstrated efficacy with Investigational use. Contraindications include Per trial protocol. Clinicians should monitor for As reported in trial monitoring.

# Detailed Clinical Management

## Diagnostic Criteria

Diagnosis of Stable Angina, Hypertension should be based on clinical presentation, laboratory findings, and imaging studies as appropriate. Consider differential diagnoses and comorbid conditions. Key diagnostic features include: • Clinical symptoms consistent with Stable Angina, Hypertension • Laboratory abnormalities as expected • Imaging findings supportive of diagnosis • Response to therapeutic interventions

## Therapeutic Monitoring

Ongoing monitoring is essential for optimal patient outcomes. Current protocols recommend Standard study precautions. Patients should be assessed regularly for: • Treatment efficacy • Adverse effects • Disease progression • Need for therapy modification
